

<p>Summary</p>	<p>An SAP® Certified Integration, the OnBase Solution Suite for use with SAP ArchiveLink™ connects documents generated outside of the SAP system to SAP business objects. Regardless of format, these documents can be stored in one central repository and retrieved directly from the SAP interface. Automatic linking and indexing can be performed at the beginning, middle, or end of the business process. With the intuitive OnBase interface, end-user training is reduced while the investment of the SAP system is maximized.</p>
<p>Key Product Values</p>	<ul style="list-style-type: none"> • Maximize existing SAP investment in end-user training and expertise investments. • Ensure data integrity by automatically linking, indexing and synchronizing metadata between SAP business objects and supporting documents. • Improve efficiency by eliminating user application switching to complete standard job tasks. • One central repository stores all incoming and outgoing SAP-generated documents into OnBase. • SAP® Certified Integration that meets SAP ArchiveLink solution requirements.
<p>Usage Scenarios</p>	<ul style="list-style-type: none"> • End-Users can process more efficiently with heads-up indexing without having to leave SAP. • Managers can be more effective, efficient, and accurate when researching SAP business objects because supporting documents are already attached. The paper documents do not need to be located. • SAP Basis Administrators can archive SAP transactional data to OnBase. Before this solution, data would either remain within SAP, causing sluggish performance, or purged and never to be recovered again. • Auditors can audit based upon OnBase documents, not SAP data. They no longer need access to live transactional data that could compromise business activity.
<p>Product Design</p>	<p>Documents scanned into OnBase and transactions created in SAP are linked via the ArchiveLink Content Repository. Users can then easily retrieve the linked documents directly from the SAP interface.</p>

Key Features

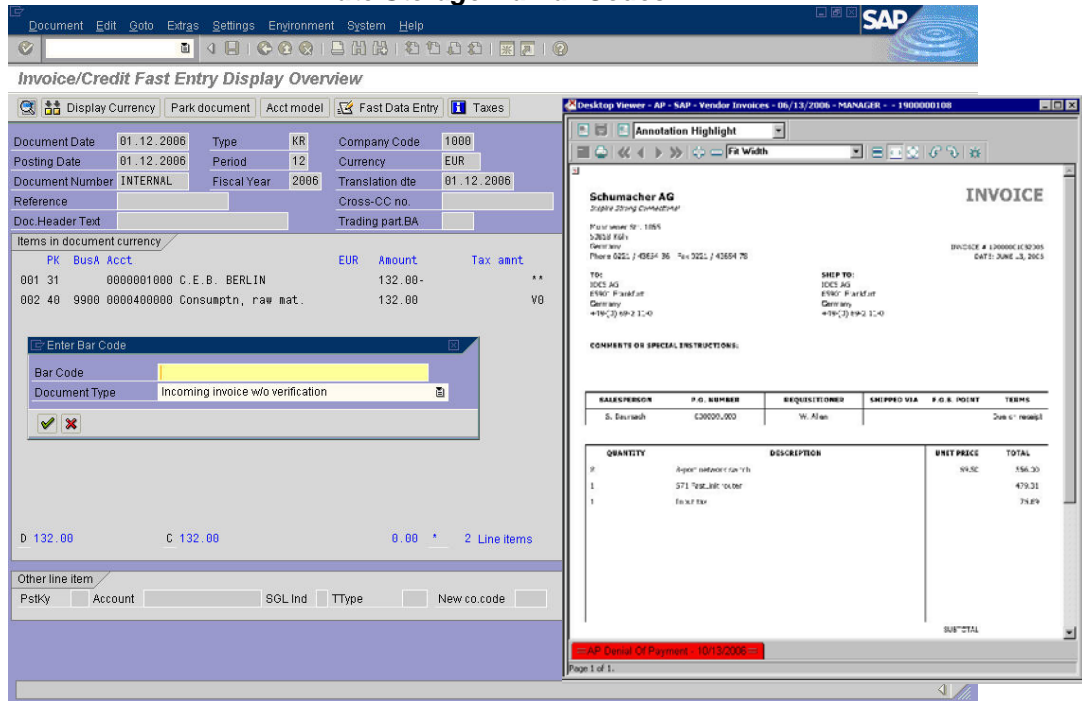

- Provides a content repository for storing and retrieving supporting SAP documents.
- Flexible storage methods to accommodate linking at various points in the business process.
- Ability to generate outgoing SAP-generated documents as PDFs in OnBase.
- Business Indexing Connector Allows automatic indexing of documents in OnBase and keeps keywords synchronized with metadata from the SAP systems.
- Stores print lists that would otherwise be physically printed and physically archived.
- Hyland Software offers a complete suite of six SAP Packaged Solutions.

Interface

Early Storage via SAP Workflow

Late Storage via Bar Codes
